PHALANX — 60-Second Competition & Social Pitch Script

Track: PayPal AI Hackathon 2026 | FinTech & Agentic AI
Tagline: *Let agents act. Keep humans and policy in control.*
Target Duration: Exactly 60 seconds (135 words @ 135 wpm)
Speaker Persona: Founder & Lead Architect (Natural Indian English, clear, authoritative, conversational)

⏱️ Video & Voiceover Timeline (0:00 – 1:00)

Timecode	Visual on Screen	Spoken Voiceover
0:00 – 0:10	Quick glitch transition into autonomous agent running wild. Red alert graphic: *"Giving an AI agent a credit card is financial suicide."* Cut to PHALANX Shield logo.	*"Giving an autonomous AI agent your credit card is financial suicide. Prompt injection, hallucinated invoices, or a runaway loop can wipe out an account in seconds."*
0:10 – 0:24	Split screen: LLM (Gemini 2.5 Flash) on the left extracts text. Green line transfers structured payload into **PHALANX Core** on the right. Hexagonal badge: `Purity: 0ms I/O`.	*"Meet PHALANX — the authorization and governance layer for financial AI agents. We let the LLM parse messy invoices, but the AI is strictly barred from the authorization boundary."*
0:24 – 0:38	Live UI: $25 cloud bill passes green (`ALLOW`). $1,200 server license routes yellow to Human Approvals (`STEP_UP`). $9,999 prompt injection gets killed red (`DENY`).	*"Instead, a pure mathematical policy engine evaluates every single cent against cryptographic Ed25519 mandates. Routine expenses pass instantly. Unseen spikes escalate to human supervisors. Attacks are killed on the spot."*
0:38 – 0:50	PayPal sandbox two-phase capture badge. Real-time SHA-256 block chain updating with PostgreSQL write triggers.	*"Every approved dollar settles securely on PayPal Sandbox through two-phase authorization, recorded on an immutable, SHA-256 hash-chained ledger."*
0:50 – 1:00	Final Hero Card: `Zero Financial Leakage	Cryptographic Proof

---

🎙️ Spoken Teleprompter Text (Continuous Read)

> *"Giving an autonomous AI agent your credit card is financial suicide. Prompt injection, hallucinated invoices, or a runaway loop can wipe out an account in seconds.*
>
> *Meet PHALANX — the authorization and governance layer for financial AI agents.*
>
> *We let the LLM parse messy invoices, but the AI is strictly barred from the authorization boundary.*
>
> *Instead, a pure mathematical policy engine evaluates every single cent against cryptographic Ed25519 mandates. Routine expenses pass instantly. Unseen spikes escalate to human supervisors. Attacks are killed on the spot.*
>
> *Every approved dollar settles securely on PayPal Sandbox through two-phase authorization, recorded on an immutable, SHA-256 hash-chained ledger.*
>
> *Zero financial leakage. Cryptographic proof for every cent.*
>
> *Let your agents act, while you stay in complete control. That is PHALANX."*

📊 Metric Summary for Display Overlay

- **Speed:** `0.4ms` deterministic policy evaluation
- **Security:** `Ed25519` asymmetric signed mandates & `RFC 8785` canonicalization
- **Auditability:** `100%` tamper-evident append-only ledger with Postgres triggers
- **Settlement:** Real `PayPal Sandbox Orders v2` two-phase capture
- **Leakage:** `$0.00` across all red-team penetration test suites
